# Introduction

*Two Plus Two is Not Five, Easy Methods to Learn Addition and Subtraction*, is a practical, supplementary workbook to teach the addition and subtraction facts to students, and includes tricks from my first book, *How to Teach Math Facts*, published in 1999 by Teacher Created Resources. The purpose of both books is to help students memorize the math facts. *Two Plus Two is Not Five* introduces the addition and subtraction facts with many easy-to-learn tricks and provides extensive practice opportunities, because mastery of basic math facts is essential for success in computation skills and solving word problems.

The math tricks and their respective practice pages are arranged in a format that is useful to

★ parents, ★ classroom teachers, ★ home schooling educators, ★ resource room teachers, and ★ tutors.

Teachers and parents will find that this is suitable for learners of any age who need to master the basic addition and subtraction facts. For this reason, the workbook pages were intentionally not designed for a particular grade level.

## **The 232 reproducible practice pages will appeal to:**

- Beginners
- Elementary school children needing instruction, practice, or review of the math facts
- Children in remedial programs
- Children in accelerated programs who need to memorize math facts
- Children with math disabilities
- Older students who still struggle because they just never memorized the math facts

Parents and teachers will appreciate how easy it is to facilitate the learning process for children.

- Self-explanatory pages are straightforward to administer.
- Lessons can be easily individualized for different learning abilities.
- Most of the pages are divided into two sections so that half sheets can be easily assigned. This will be beneficial for very young learners or those intimidated by a whole page of math to do!
- Math fact cards are assigned to go along with the practice pages.
- Children will remember answers to the addition and subtraction facts because they are learning the tricks, doing written math practice, and reviewing with the math fact cards.
- Math assignments will be completed with confidence and children will enjoy their success.
